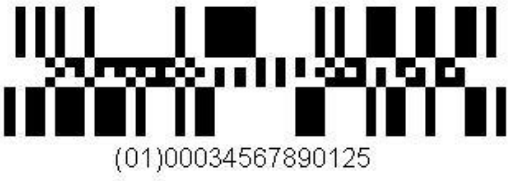
(*RSS 14 — encoded all numbers except part in braces*)

(*RSS 14 — encoded all numbers except part in braces*)



Barcode Scanner plugin reads ITF type codes on all platforms; RSS14 type codes are not recognized on iOS platform. Plugin's documentation claims, that it reads RSS_EXPANDED (Android only) and PDF417 (Android and WP8) type codes as well. However, I didn't manage to find any example of such codes, that this plugin would actually read and decode.
